

HARTNEY GREYMOUNT LANDSCAPING PROJECT

Cape Cod, MA

After a single topdressing with AGRESOIL COMPOST™, Hartney Greymount Landscaping completely revived a lawn that previously had 2% organic matter content and would not hold fertilizer applications or respond to irrigation. (See picture at left.) As a result of topdressing, increased soil organic matter content and cation exchange capacity provided for improved soil water holding and nutrient uptake by turfgrass. (See picture at right.)
