

# ISLAND GREEN COUNTRY CLUB

## Philadelphia, PA

Island Green Country Club is the first newly built Philadelphia area daily-fee course in over 50 years. Located on a site which once housed five structures and an airstrip for the Budd Company (a train and airplane manufacturing plant), Island Green Country Club offers the public an 18-hole regulation length James B. Associates (Quakertown, PA) designed course as well as a 72-tee driving range.

The tees and greens at this course were constructed with a rootzone mix that included 80% USGA specific sand and 20% Agresoil™ (formerly AllGro) biosolids compost from the Burlington County Co-Compost Facility in Columbus, NJ. The addition of Agresoil Compost™ to the rootzone mix was chosen due to its consistency, high organic matter content and proven track record as an organic amendment in golf green construction.

Utilizing Agresoil™ as an organic amendment provides additional benefits traditional soil amendments, such as peat, cannot supply. These benefits include the addition of beneficial microbes and available nutrients. These essential elements aid in the development of a soil system that will promote healthy turfgrass growth in high maintenance areas.
